

VACUUM BELL

The Myers Mixers Vacuum Bell mixer/disperser is the ideal solution for mixing settled resins or quickly dispersing fillers into liquid without entraining air into the product, eliminating the need for environmental degassing after mixing.

- De-aerate your material directly in its container.
- Heavy duty drum holder clamps drum in place.
- Load hatch with sight glass allows you to view the mixing process and to draw samples without raising the vacuum bell.
- Mix material that has settled during shipping without putting air into the batch.
- Suitable for low to high viscosity.
- Available with high-speed disperser or agitator blades.
- Available in a handcart portable model, with removable shaft for quick cleaning or batch change out.
- Sizes available from 2 gallon to 55 gallons.
- Custom designs available to meet all requirements, contact Myers for more information.
